Supplementary data 1. The years can not predict to open flowering period due to unsatisfied to complete its dormancy during the previous winter warm temperature under RCP8.5 scenario projected 2100.

2020s (29%)**2030s (43%)**

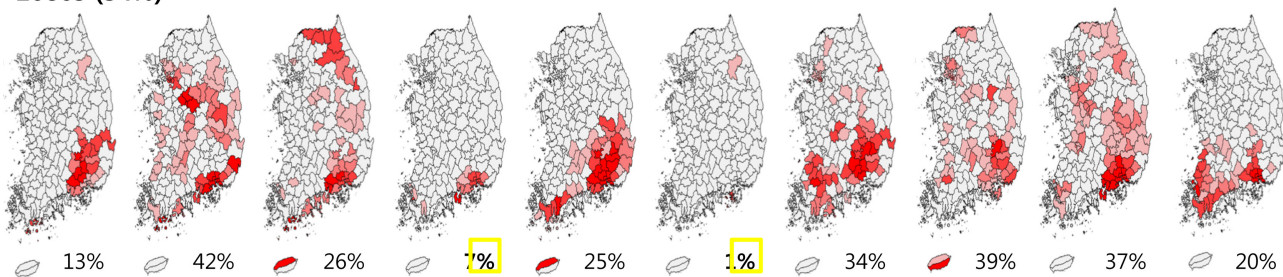

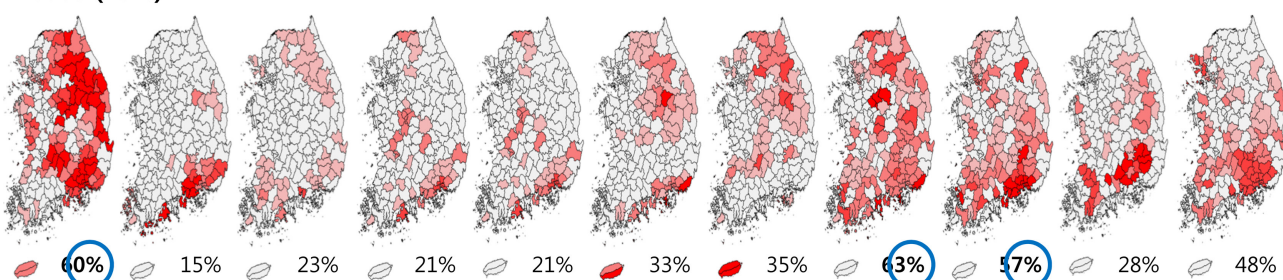

Supplementary data 2A. Covering infection days from *MARYBLTY* results according to RCP 8.5 scenario from 2020 to 2039. More than 50% of area were covered with infection risk (Blue) and less than 10% (Yellow).

2040s (41%)**2050s (32%)**

Supplementary data 2B. Covering infection days from *MARYBLTY* results according to RCP 8.5 scenario from 2040 to 2059. More than 50% of area were covered with infection risk (Blue) and less than 10% (Yellow).

2060s (48%)**2070s (51%)**

Supplementary data 2C. Covering infection days from *MARYBLTY* results according to RCP 8.5 scenario from 2060 to 2079. More than 50% of area were covered with infection risk (Blue) and less than 10% (Yellow).

2080s (34%)**2090s (43%)**

Supplementary data 2D. Covering infection days from *MARYBLTY* results according to RCP 8.5 scenario from 2080 to 2100. More than 50% of area were covered with infection risk (Blue) and less than 10% (Yellow).
